EXECUTIVE SUMMARY

HumaneAI is a European project funded by the European Commission through the H2020 Programme for research and technological development. Launched on 1 March 2019 by a consortium made up of with 35 partners from 17 countries and it will run until 30 April 2020.

This deliverable is part of WP5 community building and public outreach and is directly connected to objective groups O4 Bringing together the Community and O6 Creating public awareness and generating political momentum for the project aimed at creating a HumaneAI community and generating awareness of and support for the HumaneAI research agenda.

WP5 covers community building and public outreach of the HumaneAI project. It includes a number of tasks including political momentum building (T5.5), the mobilization of the scientific and industrial R&D community (T5.1), and civil society including IGOs, NGOs, trade unions, charities, think tanks and other influencers at the crossroads of AI research (T5.4), and creating public awareness and support for the HumaneAI project (T5.3).

Therefore, D5.2 is designed to reflect on the planned set of final events that were to be delivered in the final month at the end of the project, which due to Coronavirus outbreak were postponed to November 2020. The aligned events planned were (i) final project meeting, (ii) event at the European Parliament and (iii) Breakfast with Journalists, for which we provide details.

The Knowledge 4 All Foundation and DFKI prepared the main event with the assistance of Irena Joveva MEP, facilitated as a promotional event of the HumaneAI project to Members of European Parliament and European Commission stakeholders on 24th March in Brussels, at the European Parliament, and a second follow-up press conference in the format of a breakfast for journalists with the assistance of Jens Geier MEP on 25th March.

The theme chosen was “Facilitating a European brand of trustworthy, ethical AI that enhances Human capabilities and empowers citizens and society”. The planned participants were Members of Parliament and parliamentary bodies and committees (ITRE, ECON), guests from European Commission (DG CNECT, DG RTD) with presence from several EU institutions (Council of Europe, European Political Strategy Centre), international IGOs (UNESCO), industry (Thales), the scientific community (universities, research labs etc.), European AI communities (CLAIRE, ELLIS, K4A), and representatives from major AI research projects (AI4EU, SoBigData) and consortium members.

The sessions planned for an initial presentation by the project coordinator setting the stage followed by a set of short lectures and keynotes, with a final q/a session with AI community leaders and final non-formal discussion. The event was designed so that MEPs could come at any time of the session and could quickly catch-up with the topics presented and discussed in order to optimise knowledge transfer.

The research agenda included the presentation and inclusion of the follow-up project for the consortium, the HumanE-AI-Net which was announced on 12th March and will deliver the roadmap designed in the current HumaneAI project which includes research ranging from fundamental research, to prototypes and tools and micro-projects via a network of researchers largely overlapping in both consortiums.

Therefore, a major part of the event was designed to showcase the presentation and discussion of new scientific approaches, challenges and potential solutions in the European AI research ecosystem to demonstrate that the HumaneAI project:

1. Is strongly in line with EU policy and its needs
2. Has a strong, unified community of researchers behind it
3. Is in line and connected with relevant EU bodies and initiatives

1. INTRODUCTION

This is a summary statement of the project last meeting and promotional event at the European Parliament planned to be held in Brussels, Belgium on 24th March 2020. The title of the event was “Presenting the new science of Artificial Intelligence with European values”. The event was to be followed by a journalist breakfast on 25th March at the Members of Parliament Salon.

Both events in the European Parliament combined were designed as a promotional activity in order to showcase the potential and vision of the new approaches in European humane centred Artificial Intelligence to the Members of Parliament, to facilitate and raise awareness so they could make more informed decisions about the future of European AI.

However, all European Parliament’s meetings and activities were suspended until March 30 with an extension over the summer and staff were asked to telework as much as possible, due to the Coronavirus outbreak, the force majeure. The event is thus planned and postponed to November 2020 as part of the continuation project HumaneAI-Net.

The main project event was under the patronage of Irena Joveva MEP, Committee on Culture and Education and supported by several other MEPs from a set of parliamentary committees and delegations, and was supported by all project partners and European AI communities. The breakfast for journalist was supported by Jens Geier MEP with a selection of invited MEP and scheduled a day later for 25th March.

The programme was design to bring together four main target groups (i) HumaneAI project partners and consortium members, (ii) Members of European Parliament, (iii) European Commission personnel leading the work in Artificial Intelligence research programmes and (iv) European Artificial Intelligence networks and communities of practitioners. The main purpose of the event was to:

4. Inform interested stake-holders about the vision, its relevance for Europe and challenges that need to be addressed to make it reality.

5. Refine and improve the vision to make it best aligned with European policy goals.
6. Define a way forward to ensure that the vision gets implemented and contributes to Europe's long term competitiveness on the world stage and to maintaining and disseminating core European values.
7. Send a strong public message about the commitment of all involved to ensure an overreaching positive impact of AI technology on European economy and society.
